# KRC10

## 4-Button Wireless Key

### Committed To False Alarm Reduction

False alarm reduction is achieved through activation delays that require users to press and hold a button for a period of time before its function is initiated. For example, to trigger the arm/disarm function you must press and hold the appropriate button for one second, and for the panic alert, three seconds.

A red LED indicator on the KRC10 flashes to indicate that a transmission has been sent to the security system. The LED indicator activates only after the necessary delays have expired.

### Control

The KRC10 can be used to arm/disarm security systems from a distance, be programmed to trigger garage door openers, turn on lights, open powered gates or trigger panic alarms.

### Versatile

A multi-function clip allows the wireless key to be clipped to a convenient location, whether it's on a belt or car visor. The KRC10 is built with reliable 868 MHz technology, uses long-life lithium batteries and is compatible with the VRX32-868 wireless receiver.

For those not using the default settings, the three-second delay on the panic alert can be removed. A generic rubber button insert without the standard icons is included and can easily be inserted.

Optional generic rubber insert included
